Abstract

The purpose of this research project was to develop Document Electronic System for Official at Suratthani Rajabhat University. The program was designed and developed to network on the Internet by using Client/Server (two-tier) architecture. In developing the system, the information work and document derivation (sources) were gathered to solve many problems that occur with different sources in communities that have no information system, lack of caring and time damage. The system was develop for information recording Document data and used recording by grouping. This program is developed by gathering the information and use database system to be convenient about information gathering, improving, searching, and reporting. And the process to develop this program used My SQL to be database system and language program PHP, HTML, and SQL for working well on Web Browser.

The Alpha and Beta testing methods were used for system evaluation. The Alpha testing method was used by team developers. The Beta testing method was used by developers and users. The results indicated that the efficiency of this program was evaluated at an acceptable level and it could be used for document work.
